PROFESSIONAL SUMMARY

General Software Engineer with over four years of experience developing data-intensive web applications, APIs, real-time systems and cloud-hosted services. Experienced across frontend and backend development using React, TypeScript, Python, Django, Node.js and PostgreSQL. Strong background in data visualisation, authentication, content-management integrations, automated testing, containerisation and CI/CD. Currently completing an MSc in Computing with a Software Engineering specialisation.

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend: React, Next.js, Tailwind CSS, Redux Toolkit, Recoil, Sass, Styled Components, dnd-kit, Chrome Extensions
- **Data Visualisation:** Apache ECharts, D3.js, Chart.js
- **Backend:** Django, FastAPI, NestJS, Node.js, LoopBack, REST APIs, WebSockets, Strapi, Zod
- **Databases and Caching:** PostgreSQL, MongoDB, Firebase, Redis, SQLAlchemy, Prisma
- **Authentication and Messaging:** Auth0, Auth.js (NextAuth), Google OAuth, OAuth 2.0, Firebase Cloud Messaging
Testing: Cypress, Jest, End-to-End Testing
- **Cloud and DevOps:** Docker, AWS EC2, Cloudflare R2, GitHub Actions, GitLab CI, Nginx, PM2
- **Tools:** Git, GitHub, Figma
- **Healthcare and Applied:** FHIR, SNOMED CT, Computer Vision, OCR

EDUCATION

University of Northampton. <i>Master of Science: Computing(Software Engineering)</i>	Northampton, United Kingdom September 2025 - Present
Federal University of Technology, Owerri. <i>Bachelor of Engineering: Electrical and Electronics Engineering</i>	Imo, Nigeria September 2016 - May 2023

EXPERIENCE

Zimmerman B.V Frontend Engineer	Remote, The Netherlands. December 2023 – Present
• Develop and maintain data-intensive applications and interactive reporting tools for international development and public-sector clients using React, TypeScript and modern web technologies. • Build features for the Global Fund Data Explorer, a platform for exploring global health investment, financial and programme-result data. • Developed interactive report-builder functionality, including responsive and resizable layouts, configurable columns, component interactions and report-preview workflows. • Implemented configurable data-visualisation features, including additional bar-chart types, dataset filtering controls and options for grouping or limiting visualised data to top-ranked values. • Improved report-building reliability through autosave-failure handling, error-reporting interactions, empty states and clearer save and preview feedback. • Implemented asset-library preview and selection workflows, allowing users to inspect and insert saved assets into reports.	

- Improved builder interactions by adopting dnd-kit for drag-and-drop block reordering.
- Built reusable Apache ECharts and D3.js components that transform uploaded datasets into configurable charts and visual reports.
- Converted Figma designs into responsive, accessible React and TypeScript interfaces.
- Integrated Auth0 authentication and authorisation into client applications using OAuth-based workflows.
- Connected applications to Strapi CMS to manage content and support internationalisation across multiple languages.
- Wrote Cypress end-to-end tests to validate critical workflows and reduce regression risk.
- Implemented Redis caching in LoopBack APIs to reduce repeated processing and improve server response performance.
- Maintained containerised frontend and Strapi environments, including Docker build configuration and Node.js runtime upgrades.

Techsemester

Full-Stack Engineer

Remote, Nigeria. Part Time
February 2023 – November 2023

- Developed the frontend and backend application of a product [talnts.app](#) using React and Django, implementing user authentication using google authentication and password login.
- Implemented notifications on the application using Firebase cloud Messaging.
- Leveraged Recoil.js for a streamlined, scalable, and efficient state management system, enhancing the application's data flow.
- Deployed the backend applications' microservices on AWS EC2 utilizing Docker. Also set up CI/CD with GitHub Actions.

Alajo.

Full-Stack Engineer

Lagos, Nigeria
May 2022 – February 2023

- Developed a live location tracking map for company agents, utilizing Google Maps APIs and Firebase integration with the company's devices.
- Created an admin dashboard for efficient user and agent activity management and oversight within the company using React and Next.js.
- Incorporated interactive charts through React Chartjs within the admin dashboard to provide a visual representation of transactions and cash inflow, enhancing data visualization and analytics capabilities
- Incorporated SMS notifications in the applications, enhancing user confidence in transaction security.
- Introduced a USSD service, giving customers internet-independent access to our services, establishing a competitive advantage in our industry.

MyQuba

Full-Stack Engineer

Remote, Nigeria. Contract
January 2022 – May 2022

- Enhanced the frontend application by implementing server-side rendering with Next.js, significantly boosting performance and improving the application's SEO.
- Successfully deployed both the frontend and backend of the application on Ubuntu servers using Docker.

Duduzili

Backend Engineer

Remote, Nigeria. Contract
November 2021 – December 2021

- Collaborated closely with the backend team to develop and refine API endpoints for the web application using Django, effectively resolving any existing bugs.
- Introduced WebSocket on the server to facilitate real-time messaging within the chat application, as well as to enhance notification capabilities.

PROJECTS

[Koinovera](#) (React, NestJS, PostgreSQL)

- A community-powered platform for collecting and evaluating evidence around public claims, organising sources by stance (supports, disputes, context, unclear) rather than issuing true/false verdicts.
- Founded and built the product end to end: product design, React frontend, NestJS REST APIs and the PostgreSQL data model.
- Built claim search, category browsing, reference submission with source-quality ratings, and AI-assisted evidence summaries that cite the underlying references.

[PH Otakus](#) (Next.js, Prisma, PostgreSQL, Auth.js, Cloudflare R2) | [Source](#)

- Open-source community platform for the Port Harcourt otaku community, covering events and RSVPs, gallery albums, Markdown stories, newsletter sign-ups and a public member directory.

- Implemented Google sign-in with Auth.js database sessions and database-backed roles (Member, Admin, Super Admin) protecting an admin CMS for events, gallery and stories.
- Built direct browser-to-Cloudflare R2 media uploads using short-lived presigned URLs, member profiles with privacy controls, Otaku Passport badges and self-service account deletion.
- Structured data access with a repository/service/server-action pattern, Prisma migrations and Zod validation.

Vision Display (Computer Vision, Mobile, OCR)

- A mobile computer-vision application built as part of research into smart-glasses assistance for people with low vision.
- Implemented external camera display, OCR text recognition, viewport controls and face-recognition experiments.

[Skye Health / PROMease](#) (FHIR, SNOMED CT, Analytics)

- A platform for monitoring post-operative recovery through patient-reported outcome measures (PROMs) and clinical follow-up workflows.
- Built procedure-specific outcome collection, patient care timelines and clinical data presentation for care teams, using FHIR and SNOMED CT for interoperable, standardised reporting.

[Copyyt](#) (Chrome Extension, JavaScript, Web APIs)

- A cross-device clipboard Chrome extension: copy text, rich text or images on one computer and paste on another.
- Implemented end-to-end encryption with per-device keys and fingerprint-verified pairing, short-lived relay storage, and per-device sync modes.

SKILLS

- React.js, Next.js, Django, FastAPI, Nest.js, Python, Javascript, Typescript, Node.js, Git, MongoDB, PostgreSQL, SQLAlchemy, Tailwind CSS, ReduxToolkit, Recoil.js, StyledComponents, Sass, Prisma, Auth.js, Docker, Github Actions, AWS, Cloudflare R2, FHIR, Teamwork.
